

# SPECIALIZED IT FOR MODERN MANUFACTURING

## Shifting From Reactive to Proactive

Today's manufacturers operate in a fast-paced, technology-driven world where every minute counts. The right IT strategy helps you reduce downtime, protect critical data, streamline operations, and scale with confidence.

This guide explores how a proactive, industry-focused IT partner can help you stay competitive, secure, and ready for what's next.

### INSIDE THIS GUIDE:

21st Century Manufacturing

Understanding Your IT Needs

Customized IT

Minimizing Downtime

Data Security in Manufacturing

Scaling Your Operations

Time for an Upgrade

## UNDERSTANDING YOUR IT NEEDS

Manufacturers face unique IT challenges that demand more than basic support. From the plant floor to the front office, your technology must be reliable, secure, and built to keep production moving.

You need seamless plant-floor connectivity, robust network reliability, responsive workstation support, strong security, dependable backups, and line-of-business applications that work as hard as you do.

We take the time to understand your environment—both office and production—so we can deliver IT solutions that solve today's problems and support tomorrow's growth.

### KEY PRIORITIES

Network Reliability

Production System Support

Cybersecurity

Backup and Recovery

User Support

Future Planning

# TIME FOR AN UPGRADE

## Reactive IT can't keep up with modern manufacturing.

Downtime is costly. Cyber threats are constant.  
And your business can't afford to stand still.

PSeeSolutions delivers proactive, industry-focused  
IT that keeps your operations secure, efficient, and  
ready for what's next.

We go beyond break-fix. We become your  
strategic IT partner-anticipating problems before  
they happen and aligning technology with your  
business goals.

### WHY UPGRADE NOW?

Reduce downtime

Strengthen cybersecurity

Support growth

Improve productivity

Gain a strategic IT partner

# THE POWER OF CUSTOMIZED IT

No two manufacturing operations are exactly the same-and your IT shouldn't be either. Customized IT solutions are built around your facility's unique workflows, equipment, compliance requirements, software stack, and growth goals.

The result? Technology that works the way you do-driving efficiency, reducing friction, and empowering your team to perform at their best.

## WHY CUSTOMIZED IT MATTERS

### Aligned to Your Workflows

Built around your processes, not the other way around.

### Supports Plant-Floor Systems

Designed to connect with machines, PLCs, sensors, and MES.

### Integrates with Existing Tools

Seamlessly works with the software you already rely on.

### Improves Reliability

Proactive monitoring and support reduce disruptions and downtime.

### Scales with Your Business

Flexible solutions that grow as your operations expand.

# MINIMIZING DOWNTIME

## Downtime Impacts More Than You Think

Even brief disruptions can have a ripple effect across your entire operation. Downtime can lead to:

### Reduced Throughput

Every minute down is production lost.

### Missed Deadlines

Delays can disrupt schedules and strain commitments.

### Lower Labor Efficiency

Teams lose time troubleshooting instead of producing.

### Decreased Customer Satisfaction

Late deliveries and service issues hurt your reputation.

## Proactive IT Keeps You Running

A proactive IT strategy addresses issues before they interrupt your operations. By monitoring systems, maintaining infrastructure, and responding quickly to threats, we help you reduce downtime and keep your business moving forward.

### HOW PROACTIVE IT HELPS

#### Continuous Monitoring

We watch for issues 24/7.

#### Rapid Response

Fast support minimizes disruption.

#### Preventive Maintenance

We fix small issues before they grow.

#### Backup Readiness

Your data is protected and recoverable.

#### Resilient Infrastructure

Redundant systems keep you connected.

# DATA SECURITY IN MANUFACTURING

## Protect What Powers Your Operations

Manufacturers rely on connected systems and data to drive productivity, quality, and innovation. But with connectivity comes risk. Cyber threats like ransomware, phishing, and unauthorized access can disrupt production, steal intellectual property, and damage your reputation.

A strong security strategy protects your operational data, production systems, vendor communications, and business continuity-so you can operate with confidence and resilience.

### SECURITY PRIORITIES:

Endpoint Protection

Access Control

Backup and Recovery

Patch Management

Employee Awareness

Ongoing Monitoring

# 21ST CENTURY MANUFACTURING

## Technology-Driven Production Demands Smarter IT

Modern manufacturers run complex, connected operations where every second counts. Automation, real-time data, ERP systems, and smart equipment are driving productivity but only when your IT keeps everything running seamlessly.

From the plant floor to the boardroom, success depends on secure networks, reliable systems, and the visibility to make faster, better decisions.

### HOW PROACTIVE IT HELPS

#### REDUCE DISRUPTIONS

Minimize downtime and keep production moving.

#### SUPPORT CONNECTED OPERATIONS

Keep machines, systems, and people seamlessly connected.

#### IMPROVE VISIBILITY

Turn real-time data into actionable insights across your plant.

#### STRENGTHEN PERFORMANCE

Secure your data, protect your systems, and scale with confidence.

# SCALING YOUR OPERATIONS

## Plan Today. Scale Tomorrow. Lead With Confidence.

As manufacturers grow, IT must grow with them. More users, more locations, more devices, more data-and more pressure to perform.

Whether you're opening new facilities, adding shifts, adopting new technologies, or increasing reporting demands, your IT systems need to scale without slowing you down.

A proactive IT strategy ensures your technology keeps up with your business, so you can focus on what matters-innovation, quality, and growth.

### BUILT TO GROW:

Scalable Infrastructure

Better Visibility

Stronger Support

Smoother Onboarding

Long-Term Planning
